

# JULIEN CATALA

Full Stack Web Developer

## IN BRIEF

With over 10 years of experience as a full stack developer, I can build whatever you need from a complex API to interactive layouts. Learning continuously, I have been playing around with a lot of different technologies, concepts and tools; I can help on the technical architecture and choices of your project. I can bring my expertise on the most up-and-coming technologies; Laravel, Angular, VueJS are frameworks that I use daily. I'm also used to the Agile methodology and able to precisely estimate my workload. I'm a team player who's interested in working with professional and open-minded people. I value quality over quantity. I love teaching and have always helped the junior developers whom I have worked with.
